A Frog's Life

How does a frog begin its life?

It begins as a very small egg.

In about ten days, a tadpole hatches.

The tadpole lives in water.

It uses its tail to swim like a fish.

It has gills to help it breathe.

It eats many plants in the water.

After five weeks, the tadpole grows lungs.

It does not have gills any more.

In about six more weeks, the frog grows legs.

It does not have a tail any more.

Now the frog can live on land.

Now it can hop from place to place!
